

A photograph of an oilfield site featuring two tall, vertical artificial lift systems. Each system consists of a red base, a white ladder-like structure, and a long vertical pipe. In the background, there are large industrial tanks and a clear blue sky over a desert landscape.

Artificial Lift

We deliver a field-proven, highly-engineered, comprehensive resource for artificial lift equipment and packaged solutions all over the world.

Our breakthrough innovations in hydraulic rod pumping systems, progressing cavity pump systems and automation controls & monitoring are changing the way operators view their long-term production through artificial lift. Our artificial lift professionals will collaborate with you to properly evaluate well conditions and provide customized solutions, helping you to optimize your production for the life of your wells. Let us be your new 24/7 production partner.

Rod Pumping Systems

We provide rod pumping systems deliver enhanced safety, increased efficiency, longer MTBF and better control over your oil and gas production. With a smaller footprint, quick installation time and the ability to quickly adjust stroke speed and length, our family of reliable artificial lift alternatives are engineered to maximize the profitability of each well for years to come.

Products include:

- Hydraulic Pumping Units
- Automation Controllers and Monitoring
- Downhole Rod Pumps and Components
- Service Hookups

Production Service Hookup

Our products are recognized for a superior quality and design, unsurpassed in the oilfield. From the largest range of stuffing boxes and production blow out preventers to the most comprehensive line of polished rod accessories, our equipment can complete a total hookup for your progressing cavity pump & rod pumping applications.

Products include:

- Stuffing Boxes & Packing
- Blow Out Preventers
- Tubing & Rod Rotators
- Polished Rod Accessories
- Wellheads
- Hookup Accessories

Artificial Lift

Progressing Cavity Pump Systems

Our Progressing Cavity Pumping (PCP) Systems are designed for use in both oil production and dewatering applications where the economics of production demand efficiency, reliability and low life-cycle cost from the production equipment.

Products include:

- Wellhead Drives
- Automation Controllers and Monitoring
- Downhole Pumps and Accessories
- Pump Optimization Design Software
- Service Hookups
- Patented Tools and Technologies

Automation, Control & Monitoring

Whether you're managing hydraulic rod pumps, progressing cavity pumps or conventional pump jacks, we offer a full line of automation, control and monitoring options to maximize production and profitability. Even in the harshest conditions, our field-proven units are easy to read and operate, while delivering feature-rich technology – giving operators complete management, flexibility and control over well production. Our powerful processors, using the latest modeling and production optimization software, enable our customers to gain complete access and control over their production operations and well data. Access your information either on-site or via remote well control & monitoring, using satellite, cellular and radio with web-enabled communications.

Products include:

- Rod Pump Controllers
- PC Pump Controllers
- Hydraulic Pumping Unit Controllers
- Proprietary software
